PROFESSIONAL PROFILE

Cyber Security and Digital Forensics graduate (BSc Hons, 2:1) with hands-on security operations experience built across a self-deployed Microsoft cloud SOC environment. Skilled in alert triage, incident investigation and escalation using Microsoft Sentinel, Defender XDR, Defender for Endpoint and Entra ID, with KQL used daily to hunt across authentication, process and network telemetry. Experienced in mapping activity to MITRE ATT&CK, validating vulnerability remediation and producing clear, evidence-based incident reports. Currently working towards Microsoft SC-200 and bringing two years of frontline security operations experience in live CCTV monitoring and incident escalation.

CORE TECHNICAL SKILLS

Microsoft Security: Microsoft Sentinel, Defender XDR, Defender for Endpoint, Defender for Office 365, Entra ID & ID Protection, Azure Monitor, Log Analytics, Data Collection Rules, Advanced Hunting, MFA, Conditional Access

SIEM & Detection: KQL, Sentinel analytics rules, workbooks & dashboards, SecurityEvent, SigninLogs, AuditLogs, DeviceProcessEvents, DeviceNetworkEvents, DeviceLogonEvents

Incident Response: Alert triage, incident investigation & escalation, event correlation, IOC analysis, evidence collection, incident timelines, root-cause analysis, MITRE ATT&CK mapping, incident reporting

Vulnerability & Network: Nessus, Nmap, Nikto, Trivy, OWASP ZAP, CVE/CVSS risk assessment, remediation validation, Wireshark, tshark, TCP/IP, DNS, TLS/SSL, packet analysis

Forensics & Systems: FTK Imager, Autopsy, evidence preservation, Windows artefact analysis, Azure VMs, Windows Server, Windows 10/11, Linux, Docker

Scripting & Governance: Python, PowerShell, Bash, KQL, ISO/IEC 27001:2022, NIST AI RMF, GDPR, RBAC and least-privilege principles

SECURITY OPERATIONS PROJECTS & LABS

Microsoft Cloud SOC & Incident Response Lab

Microsoft Sentinel · Azure Log Analytics · Defender XDR · Entra ID · KQL

- Designed and deployed an end-to-end cloud SOC, configuring Azure Monitor Agent and Data Collection Rules to ingest Windows Security Events and Defender telemetry into Microsoft Sentinel.
- Wrote KQL queries to detect failed authentication bursts, suspicious process execution, anomalous network activity and potentially compromised accounts, and built Sentinel workbooks to visualise sign-in and alert trends.
- Brute-force investigation:** Investigated repeated Windows logon failures (Event ID 4625), correlating source IP, account and timestamps against subsequent successful sign-ins to assess credential-attack behaviour.
- Suspicious PowerShell:** Analysed command-line arguments, parent/child process chains and user context from endpoint telemetry, mapped the behaviour to MITRE ATT&CK and recommended containment actions.
- Compromised account:** Reviewed sign-in logs, authentication methods, locations and Conditional Access results to assess account compromise and define a response plan.
- Produced structured incident reports covering alert summary, affected assets, evidence, timeline, findings, ATT&CK mapping and recommended remediation.

Microsoft Defender XDR & Endpoint Security Lab

Defender XDR · Defender for Endpoint · Advanced Hunting

- Triaged endpoint alerts and incidents using device timelines, and used Advanced Hunting to pivot across process execution, logon activity and outbound network connections.
- Practised endpoint isolation, containment and remediation workflows, documenting repeatable investigation procedures.

Microsoft Entra ID Identity Security Lab

Entra ID · MFA · Conditional Access · Identity Protection

- Configured users, groups, roles, MFA and Conditional Access policies, applying least-privilege and RBAC principles.
- Investigated risky sign-ins and failed authentication events, analysing policy outcomes and documenting remediation recommendations.

Vulnerability Management & Remediation Lab

Nessus · Nmap · Trivy · Nikto · OWASP ZAP

- Ran authenticated and network scans across Windows and Linux VMs, identifying exposed services, outdated software and insecure configurations.

- Researched associated CVEs, prioritised findings by CVSS severity, exploitability and asset criticality, then remediated and re-scanned to validate closure.
- Reported findings using a discover → assess → prioritise → remediate → validate workflow with supporting evidence.

Additional Labs — Network, Forensics & Mobile Security

- **Network investigation:** Captured and analysed traffic with Wireshark and tshark, investigating DNS queries, TCP sessions and TLS configurations to identify unusual communication patterns.
- **Digital forensics:** Acquired and examined evidence with FTK Imager and Autopsy, applying chain-of-custody and preservation principles to file-system artefact analysis.
- **PacketHawk:** Built an Android packet-capture app using the VPN API (no root) to extract and analyse DNS and network activity, published on GitHub.
- **ISO/IEC 27001 ISMS:** Produced a risk register and Statement of Applicability for a simulated organisation, mapping controls and presenting findings to non-technical stakeholders.

PROFESSIONAL EXPERIENCE

CCTV Operator — Maritime Transport, Bristol Avonmouth

Feb 2025 – Present

- Monitor multiple live CCTV feeds across a large 24/7 operational site, identifying suspicious, unsafe or unusual activity in real time.
- Triage incidents against established procedures, escalate to supervisors and site management, and maintain accurate incident logs and shift handovers.
- Sustain accuracy and attention to detail while monitoring several information sources at once in a time-sensitive environment — directly transferable to SOC alert monitoring and escalation.

Security Officer / Door Supervisor — G4S (DWP Job Centres), Bristol

Jul 2024 – Mar 2025

- Controlled access to government premises under established security procedures and identified, documented and escalated security incidents.
- De-escalated difficult situations through clear communication and professional judgement, maintaining accurate operational records.

Delivery Driver — Evri

Aug 2024 – Jan 2025

- Managed time-critical workloads independently with accurate record-keeping and professional customer communication.

EDUCATION

BSc (Hons) Cyber Security and Digital Forensics — 2:1

Awarded June 2026

University of the West of England, Bristol

- Key modules: Computer Crime and Digital Evidence, Forensic Computing Practice, Secure Computer Networks, Operating Systems, Data Science for Cyber Security, Security Management in Practice, Cyber Security Consultancy.
- **Dissertation — Security & Privacy Risks in Generative AI Tools:** Researched security and privacy risks in ChatGPT, Gemini and Microsoft Copilot; built a risk taxonomy covering confidentiality, integrity and privacy, mapped to NIST AI RMF, ISO/IEC 23894, GDPR and the EU AI Act.

Diploma in Computer Science

2022

- Included Cisco networking training and computer science fundamentals.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Microsoft Certified: Security Operations Analyst Associate (SC-200) — in progress, exam planned.
- Microsoft Security Operations Analyst training: Sentinel, Defender XDR, Defender for Endpoint, Entra ID, KQL, threat detection and incident investigation.
- SIA Door Supervisor Licence | Full UK Driving Licence.
